## **Amendments to the Abstract**

Please amend the Abstract to read.

-- An apparatus (20)-such as a television signal receiver, radio or other device provides an emergency alert function. According to an exemplary embodiment, the apparatus (20)-includes a processor (27)-operative to detect a first condition wherein signal strength on a selected channel frequency associated with the emergency alert function exceeds a predetermined threshold, and to detect a second condition wherein a broadcast test associated with said emergency alert function is passed. A visual indicator (30)-is operative to provide a predetermined output if the first and second conditions are detected. --
